# W-Series 4-Leg Table w/ Wire Management Assembly Instructions

## Tools Required for Leg Installation:

- #2 Phillips Head Screwdriver
- (Recommended) Cordless Screwdriver with #2 Phillips Bit

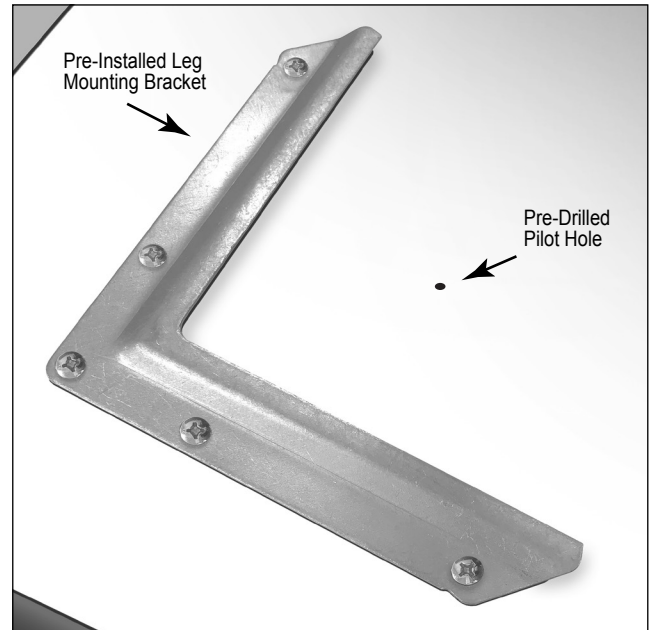

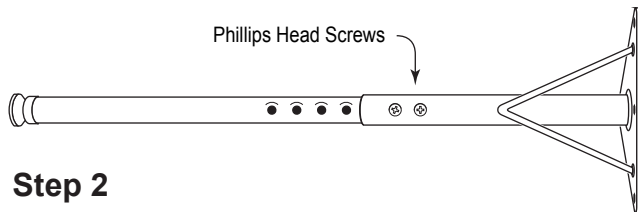

## Hardware Included:

- 4 x 3/4" #10 Phillips Head Screws
- 8 x 3/4" Pan Head Phillips Head Screws (2 per leg)

### Step 1

Carefully remove outer packaging and place the table topside-down on a clean, non-scratching surface.

You will see four or more heavy duty steel brackets on the underside of the table top. These brackets have been pre-installed at the factory to ensure perfect leg positioning and make assembly easier and faster.

### Step 2

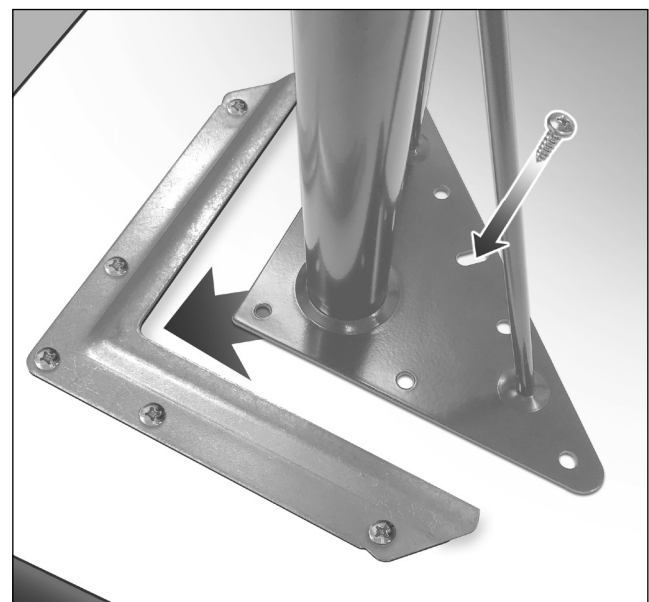

Set the heights of your Classic legs. Use a standard #2 Phillips head screwdriver to tighten the pair of set screws. Check that all legs are set to the same height before proceeding.

NOTE: Allow for the table top thickness of 1-1/4" when determining height.

### Step 3

Turn the leg upside down and slide it fully into the pre-installed bracket. The pilot hole will be visible when the leg is fully engaged. Install the Phillips head screw through the slotted center hole and into the table top. Tighten fully, and repeat for all remaining legs.

Proceed to Wire Management Panel Assembly.

# Wire Management Panel

## Assembly Instructions

### Tools Required for Panel Assembly:

- 8" Phillips Screwdriver or Cordless Screwdriver with 8" or Longer Extension and #2 Phillips Bit
- 7/16" Socket and 7/16" Combination Wrench

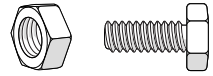

### Hardware Included:

10 x 3/4" Phillips Wood Screws

4 x 1/4" Hex Bolts

4 x 1/4" Hex Nuts

### Step 4

Attach the Wire Panel's end caps to the center section using four hex nuts and bolts. Be sure all mounting flanges are on the same side.

Tighten nuts fully.

### Step 5

Attach the assembled panel to the underside of the table top using the 3/4" wood screws. Align and fasten the tray using the pre-drilled pilot holes.

\* Do not use the keyhole shaped holes.

With a helper, turn the table right side up and enjoy many years of sturdy, reliable service.
